

Login to the control panel

The control panel is a Linux based web hosting control panel that provides a graphical user interface and automation tools designed to simplify the process of hosting your website. Each individual section of your web hosting control panel is separated by functions that provides an accessible method of easily performing different actions. Subsequently these actions provide direct control over setting up email, uploading files, installing add-ons, managing domain names and web hosting.

Position the mouse pointer towards the bottom left corner of the taskbar then click on the start button. This will result in the start menu being opened providing you with a list of the programs installed onto your computer system.

Next you need to open the web browser by clicking on the Internet Explorer icon. This will result in the Internet Explorer program being loaded on the desktop screen.

Position the mouse pointer the top left corner of the web browser then click on the address bar. This provides you with the ability to specify a web address through the keyboard.

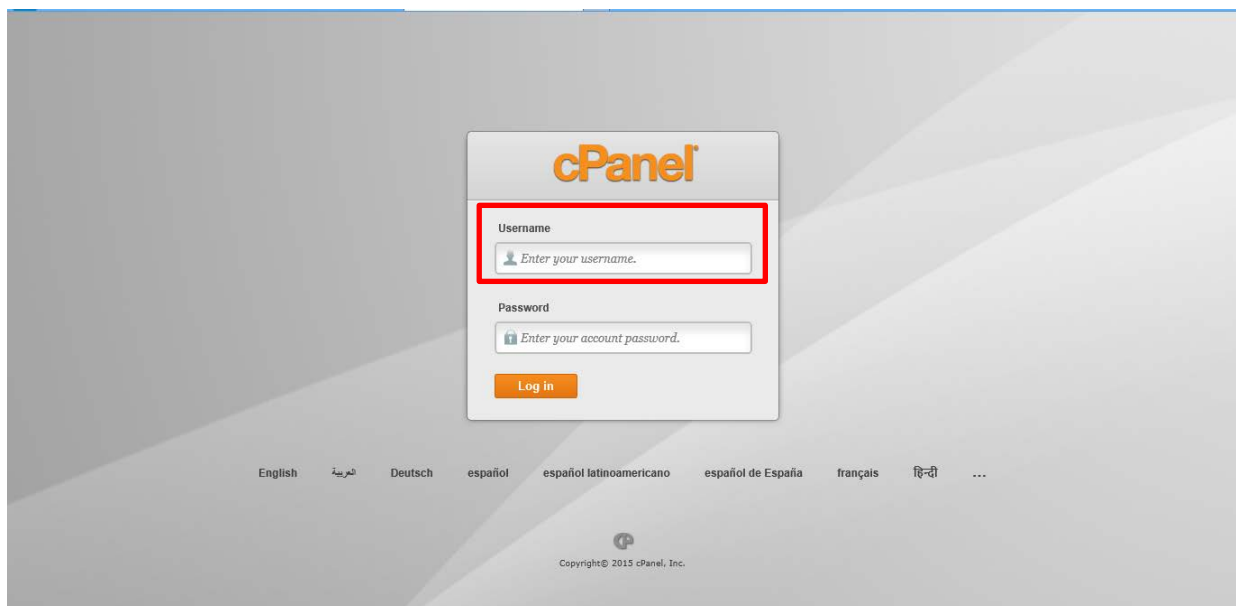

Type in the address of your website into the address bar in the following format

<http://www.mywebsite.co.uk/cpanel> then select the go button on the right side of the address bar.

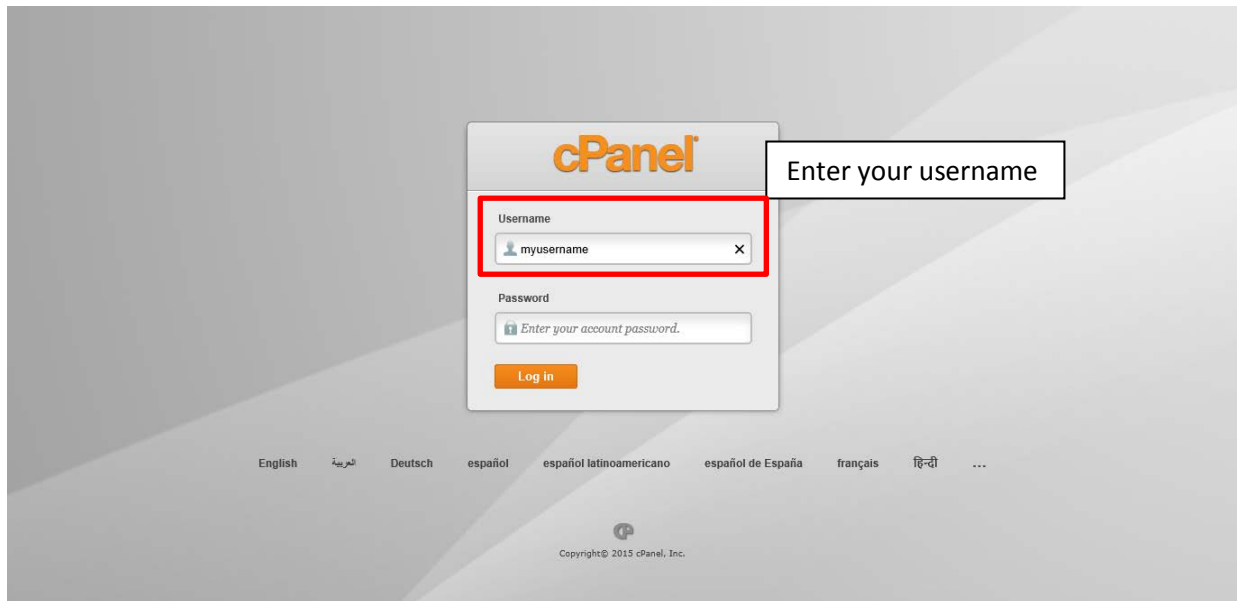

This will result in the web hosting control panel login page being loaded within the web browser.

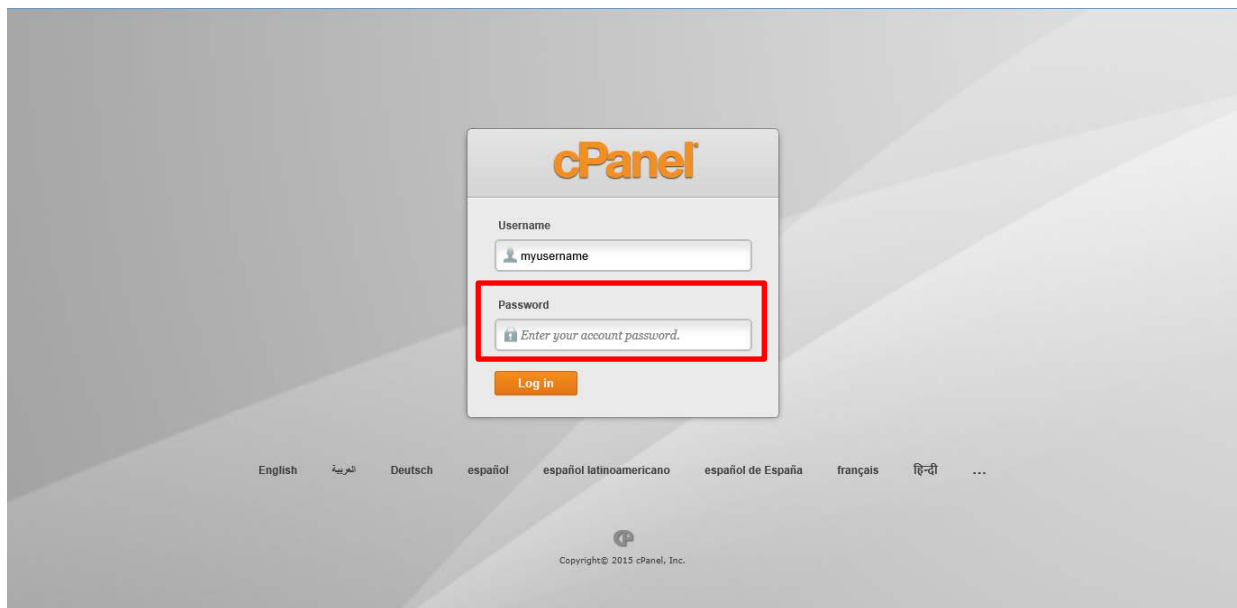

To log in to the web hosting control panel you need to position the mouse pointer over the area that contains "Enter your username." then click on the username input box. This will result in the username box being selected

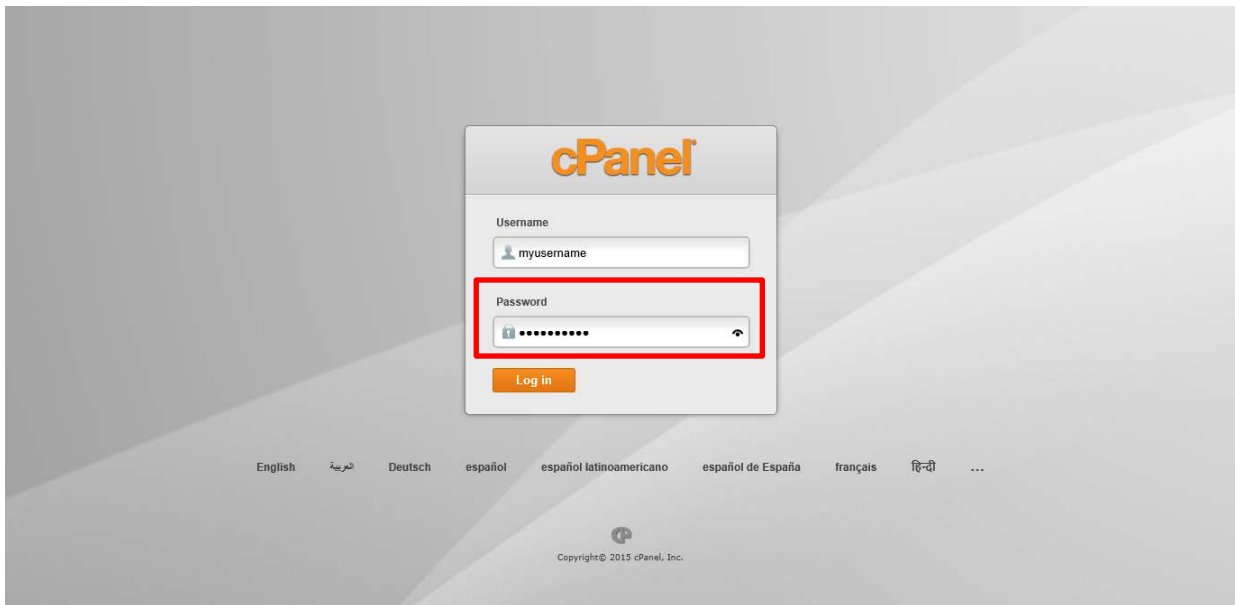

Enter your web hosting account username into the input box through the use of the keyboard. This will result in the username entered being displayed within the web hosting control panel login form.

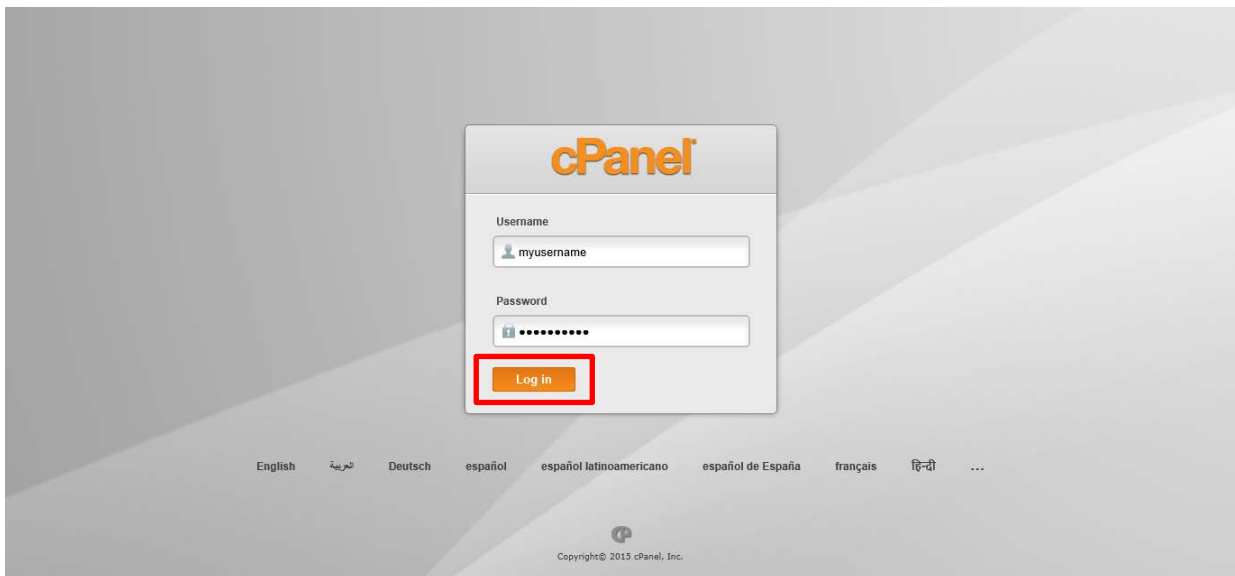

Next you need to position the mouse pointer over the area that contains “Enter your account password.” then click on the password input box. This will result in the password box being selected.

Enter your web hosting account password into the input box through the use of the keyboard. This will result in the password entered being displayed as a series of dots within the web hosting control panel login form.

Position the mouse pointer towards the bottom left corner of the login form then click on the log in button. This will result in the username and password that you submitted being checked to make sure that it matches your web hosting account details.

The web hosting control panel will now be displayed within the web browser window as shown in the screenshot below. In the event that your web hosting control panel has not loaded retype your username and password again making sure that information matches your account details exactly.
